# SyQuick

The SyQuick pump is the perfect solution when the installation space is limited and the service needs to be fast and simple: changing the rotor and the stator doesn't require the removal of the piping and the dismantling of the entire pump anymore, with a significant reduction of time and maintenance costs.

- **Telescopic flange** to ease and make faster the removal of the stator and the rotor.

- The removal of the stator and of the rotor is entirely accomplished in place, thanks to a **special support**.

- The pump **tie rods** are used both to fix the stator to the rotor and to ease the extraction of the rotor from the stator.

## Advantages

- Maintenance on-site
- Reduced maintenance time
- Reduced downtime
- Limited installation space

## Models

- K range
- W range
- G range

## Pressure

- Up to 24 Bar

## Flow rate

- Up to 150 m<sup>3</sup>/h
