M Range

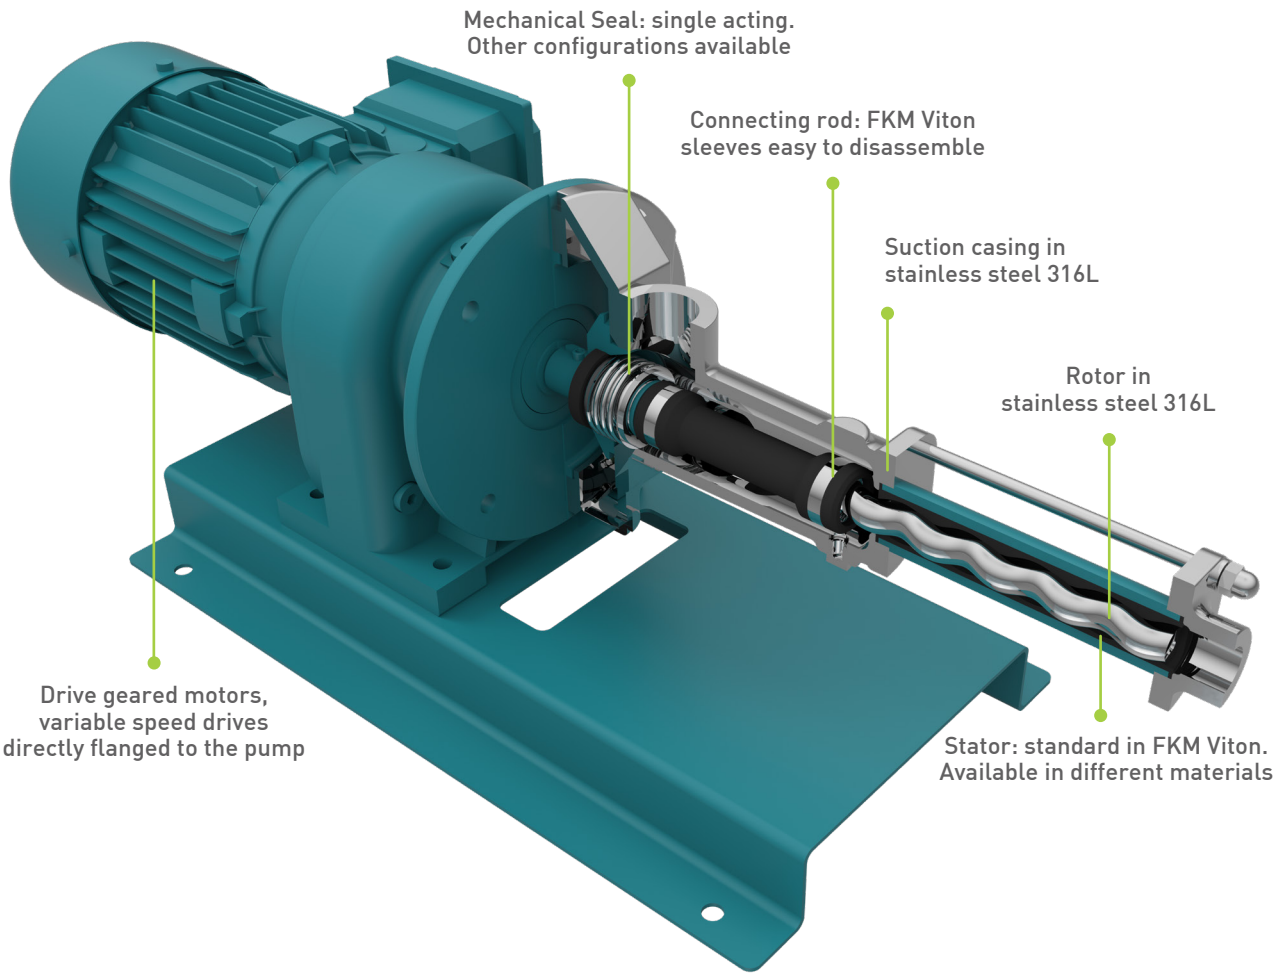

Metering Progressing Cavity Pumps

The M range metering progressing cavity pump series is designed specifically for dosing any kind of liquid.

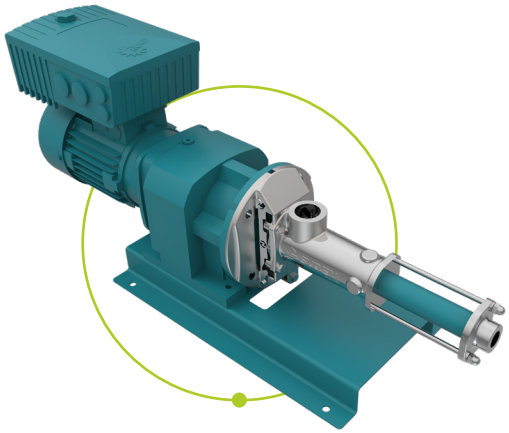

Advantages

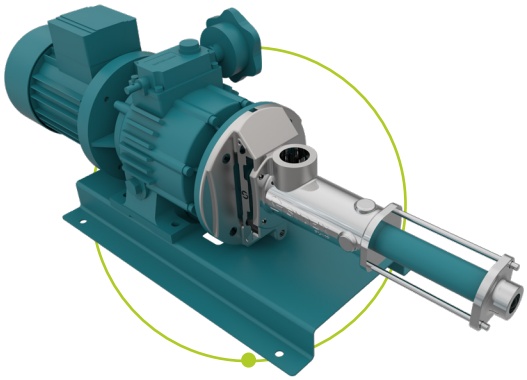

- Robust design, cleverest delivery time and best value for money in the market.
- Wide pumps range.
- Extremely high accuracy with the maximum variation of ± 1%.
- Easy and reliable control of dosing capacity.
- Different rotor and stator sizes and different dosing capacities within one modular design envelope.
- Quick assembling and dissasembling system.

Other configurations

Gearmotor with VFD version

Motovariator version

Application fields

Industrial applications in environmental technology.
Industrial applications in the oil & gas industry.
Industrial applications in the chemical industry.
Industrial metering applications.
